RACK59 to Offer Direct Access to Console's Software and Interconnection Platform

Platform Provides RACK59 Customers with Direct Connections to Leading Cloud Infrastructure and SaaS Providers

Oklahoma City, OK – September 9, 2015 – RACK59, Oklahoma's Premier data center, announced today that the company has joined the Console Data Center Partner Program to provide its customers with access to Console, the enterprise software and interconnection platform that is changing the way businesses directly connect to their customers, vendors, and partners.

The Console Data Center Partner Program provides a turnkey solution for data center operators to offer customers direct access to Console for network-to-network and enterprise-to-enterprise collaboration globally. The partner program provides the necessary support to make a datacenter Console-enabled as well as marketing resources to highlight their business.

The Console software and interconnection platform provides a secure, simple, and faster way for companies across the globe to directly connect to business-critical cloud providers, SaaS providers, and partners. By combining direct access from within a Console-enabled datacenter with Console's network automation technology, customers gain access to a global ecosystem without the configuration complexity.

"With access to Console, our customers have the ability to experience greater security and reliability, better performance, visibility and control," says Dusty Burchfield, RACK59 Partner, Sales Manager. "Another bonus is the money that they can save."

"We are excited to welcome RACK59 as the first Datacenter Partner that will offer direct access to the Console platform in Oklahoma, said Al Burgio, CEO, Console. "Our platform will provide an opportunity for RACK59 to expand its service offerings to existing and new enterprise customers."
