

Peerless Network Unveils International Solution Suite at ITW 2017

CHICAGO, Illinois-May 15, 2017 – Peerless Network today announces a suite of solutions designed specifically for International Carriers seeking a foothold in the lucrative, yet competitive US telecom market.

For telecommunication Carriers operating outside of the US, gaining traction in the North American marketplace has several real and potentially insurmountable challenges, namely the time and expense of building out dedicated facilities, securing significant volumes of telephone number blocks and negotiating and implementing interconnection agreements with multiple carriers, both large and small. The process repeats itself for those carriers who also want a mobile presence.

Which is why Peerless Network is pleased to announce our suite of services specifically designed to make the process of US expansion quicker, easier and more cost-efficient for our International customers. The suite includes: US Termination Service, White Label Carrier Service and WiFi First – Voice and Messaging over WiFi Service.

US Termination – allows Global Carriers to terminate calls into the US via the Peerless Network, resulting in simple negotiation (no fees and no commitment), fast implementation and extremely competitive pricing.

White Label Service – a seamless and transparent means for an International Carrier to provide service within the United States, without the necessity of implementing a physical presence in-country. All of the quality and reliability of their own operations, without the hassle of an expensive build-out.

WiFi First – Voice and Messaging over WiFi—mobility service with a preference for WiFi networks, enhanced with patented IP-to-IP soft handoff for seamless transfer from cellular to WiFi signally. The result is an offering that expands coverage, improves satisfaction and reduces call costs up to 40%.

“Peerless Network is excited to welcome International Carriers onboard and provide them with a suite of services purpose-built to facilitate their expansion and operations within the US,” said Rick Knight, EVP of Sales and Marketing for Peerless Network.

FOR IMMEDIATE RELEASE

“Just as we’ve done for the past 10 years in the Domestic and recently the Mobile market, we are now doing for our International segment, using our core strengths—our full suite of high-quality services and our innovative and interconnected network—to build a niche solution that facilitates the process of entering new markets, maintaining consistent quality and reliability standards and most importantly, lowering capital and operating expenses, which is what every carrier needs and wants,” Knight explained.

About Peerless Network:

Peerless Network simplifies the interconnection process of telecommunication systems and enhances competitiveness in emerging markets. We build solutions that help customers lower their costs, scale more efficiently, enter new markets faster and improve the quality of service they deliver to their own customers.

We offer a complete line of tandem, end-office and value-added services designed specifically to enhance competitiveness in the telecom market. Wireless Carriers, IXC’s, Cable Companies, CLECs, VoIP and Enhanced Service Providers and telecom-intensive Enterprises all rely on Peerless Networks to provide high-quality and innovative services, at market-driven rates.
